CSA1503-CLOUD COMPUTING

20.Install Virtualbox with different flavours of linux or windows OS on top of windows 10 using custom installation.

Aim:

To install Oracle VirtualBox on a Windows 10 host system using custom installation and create virtual machines with different Linux or Windows operating systems on top of Windows 10.

PRODECURE:

1. **Download VirtualBox** and the required OS ISO files, such as Ubuntu Linux, Linux Mint, or Windows.
2. Run the **VirtualBox installer** on Windows 10 by double-clicking the downloaded .exe file.
3. In the installation wizard, select **Custom Installation** and choose the required installation location and components.
4. Select the required components such as **VirtualBox Application, USB Support, Networking, and other available features**, then continue the installation.
5. Complete the installation and open **Oracle VM VirtualBox Manager**.
6. Click **New** to create a new virtual machine. Enter a suitable name, select the required OS type and version, and choose the location for storing the VM.
7. Select the downloaded **ISO image** of the operating system as the installation medium.
8. Allocate suitable **RAM, processor cores, and virtual hard-disk space** according to the requirements of the guest operating system.
9. Click **Finish/Create** to create the virtual machine.

OUTPUT:
