CSA1503-CLOUD COMPUTING

21. Install Virtualbox/VMware Workstation with different flavours of linux or windows OS on top of windows 7 or 8.

Aim:

To install **Oracle VirtualBox or VMware Workstation** on a **Windows 7/8 host system** and create virtual machines for different **Linux or Windows operating systems**.

PROCEDURE:

1. Download and install **Oracle VirtualBox or VMware Workstation** on the Windows 7/8 host computer.
2. Open **Oracle VirtualBox/VMware Workstation** after completing the installation.
3. Select **New / Create a New Virtual Machine** to create a virtual machine. In VirtualBox, the New wizard allows you to specify the VM name, operating system, hardware and virtual hard disk.
4. Enter a suitable **name** for the virtual machine and select the required operating system, such as **Ubuntu/Linux or Windows**.
5. Select the required **ISO image** of the operating system as the installation medium.
6. Allocate suitable **RAM and processor** resources to the virtual machine.
7. Create a **virtual hard disk** and specify the required disk size.
8. Complete the VM creation process and click **Start/Power On**.
9. The virtual machine boots from the selected ISO file and starts the operating-system installation.

OUTPUT:
